

Information Security Risk Management K-12 Primer

Scott Stansbury- *Director, Technology Infrastructure, Round Rock ISD*

Clarence Campbell- *Information Security Officer, Round Rock ISD*

February 18, 2021

Information Security Risk Management

- Information Security can be viewed as the “umbrella” that all of an Organization’s data in any form falls under, e.g. written or electronic.
- Cybersecurity is securing an Organization’s electronic data in cyberspace which belongs to the Information Security umbrella.
- It is almost impossible to completely protect all data, whether written or electronic from the risk of compromise and maintain efficient availability of data and Information Systems
- Therefore, Information Security Risk Management is an absolute must for organizations and business areas to identify and manage the risks of their data being compromised.
- Risk Management can be viewed as the cornerstone of an Information Security Program

- ❑ **What is Risk Management and how do we apply Risk Management to our InfoSec program ?**
- ❑ **Texas Administrative Code 202- Risk Management Defined**
 - The process of aligning information resources risk exposure with the organization's risk tolerance by either accepting, transferring, or mitigating risk exposures.
 - What does this mean and how do we apply this ?
- ❑ **Risk Management begins with identification of risk, ranking severity of risk, then planning to address the identified risks.**
 - How do we do this ?
- ❑ **Methods of identifying risk**
 - Security Controls Assessment - more compliance based
 - Texas Cybersecurity Framework- more compliance and InfoSec Program maturity based
 - Risk Assessment- more risk and quantification of risk focused (*determination of risk severity*)
 - Continuous Monitoring- Risk is part of InfoSec, new risks will be discovered, determine severity and add them to the Risk Management Tracking solution

Compliance Requirements

❑ Texas Association of School Boards (TASB)

- **TECHNOLOGY RESOURCES CQB CYBERSECURITY (LEGAL), DATE ISSUED: 9/17/2019
UPDATE 114 CQB(LEGAL)-P, CYBERSECURITY POLICY**

Each district shall **adopt** a cybersecurity policy to:

1. Secure district cyberinfrastructure against cyber attacks and other cybersecurity incidents; and
2. Determine cybersecurity risk and implement mitigation planning.

A district's cybersecurity policy may not conflict with the information security standards for institutions of higher education adopted by the Department of Information Resources (DIR) under Government Code Chapters 2054 and 2059.

❑ Texas Department of Information Resources (DIR) Security Standards for Institutions of Higher Education

- **Texas Administrative Code (TAC) 202 Control Standards**

Establishes a baseline of security standards for Texas state agencies and institutions of higher education, TAC 202 Subchapter C addresses institutions of higher education.

TAC 202, Subchapter C, 202.76, Security Controls Standards Catalog

(a) Mandatory Requirements. Mandatory security controls shall be defined by the department in a Control Standards document published on the department's website.

TX DIR Security Controls Catalog

❑ TX DIR Security Controls Catalog, RA-3 Risk Assessment

- CONTROL DESCRIPTION The organization:
 - a. Conducts an assessment of risk, **including the likelihood and magnitude of harm**, from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information system and the information it processes, stores, or transmits;
 - b. Documents risk assessment results in [Selection: security plan; risk assessment report; [Assignment: organization-defined document]];
 - c. Reviews risk assessment results [Assignment: organization-defined frequency];
 - d. Disseminates risk assessment results to [Assignment: organization-defined personnel or roles]; and
 - e. Updates the risk assessment [Assignment: organization-defined frequency] or whenever there are significant changes to the information system or environment of operation (including the identification of new threats and vulnerabilities), or other conditions that may impact the security state of the system.

Risk Assessment Plan

- ❑ Risk Assessment Plan
- ❑ Leadership Buy-in
- ❑ Center for Internet Security Risk Assessment Method- Workbook
 - The workbook can be tailored- e.g. compare to TX DIR Controls catalog and TX CSF- Add TX Dir and TX CSF Controls
 - Create a Hybrid workbook with the NIST CSF-CISRAM Mapped xlsx Document, may want to include mapping to DIR Security Controls and TX CSF
 - Remember- identifying and determining risk severity is the objective

How foreseeable is it that this threat would occur and create an impact? Use risk assessment criteria as guidance	'What impact could this threat pose to our mission? Use risk assessment criteria as guidance	'What impact could this threat pose to our obligations? Use risk assessment criteria as guidance	Risk - Likelihood x Highest Impact Score. Acceptable risk < '4'	'Will we accept, reduce, transfer, or avoid this risk?	'What safeguard can we use to better implement the CIS Control?	'What risk would this recommended control pose to the mission, objectives, or obligations? Use risk assessment criteria as guidance	How foreseeable is it that this safeguard risk would occur and create an impact? Use risk assessment criteria as guidance	'What impact could this safeguard risk pose to our mission? Use risk assessment criteria as guidance	'What impact could this safeguard risk pose to our obligations? Use risk assessment criteria as guidance	Safeguard Risk Score
Threat Likelihood	Mission Impact	Obligations Impact	Risk Score	Risk Treatment Option	Recommended Safeguard	Safeguard Risk	Safeguard Threat Likelihood	Safeguard Mission Impact	Safeguard Obligations Impact	Safeguard Risk

Summary		The risks stated in this risk register were identified by evaluating how well the CIS Controls are applied to information assets at [Name of organization or scope of the assessment]									
Date Completed		MM/DD/YYYY									
Acceptable Risk Score is less than		4									
Unique ID	Asset Type	CIS Control Name	CIS Control Number	CIS Control Title	CIS Control Description	Information asset or asset class	How the control is currently implemented	What vulnerabilities are present, given the way the CIS Control is implemented	What threats could compromise information assets as a result of the vulnerabilities?		
Risk	Family	CIS Control	CIS Sub-Control	Title	Description	Information Asset	Current Control	Vulnerability	Threat		
Example	System	Inventory and Control of Hardware Assets	1.1	Active Discovery Tool	Utilize an active discovery tool to identify devices connected to the organization's network. This tool shall automatically update the organization's hardware device inventory when devices are discovered.	All devices.	Vulnerability scans occur occasionally and may not identify all systems that have been on the network between scans.	Systems that have joined the network between sporadic scans will not be detected.	Hackers or malware may attack and control systems that have not been detected, controlled, and monitored.		

Risk Severity

Determining Likelihood and Magnitude of Harm

❑ CENTER FOR INTERNET SECURITY RISK ASSESSMENT METHOD (CISRAM)

Likelihood Score	Likelihood Foreseeability
1	<p>(Remote), Not foreseeable. This is not likely in the environment.</p> <p><i>Implies that a threat is not likely or plausible in the environment that is being assessed.</i></p> <p><i>Ease of attacker exploitability is advanced to highly skilled.</i></p> <p><i>E.g. Physical loss of complete server may not be foreseeable of an on premise hosted application.</i></p>
2	<p>(Unlikely), but foreseeable. This is plausible, but not expected.</p> <p><i>The organization would be surprised if it occurred, somewhat likely.</i></p> <p><i>Ease of attacker exploitability is moderate to advanced skill set</i></p> <p><i>E.g. A senior executive taking copies of sensitive data to competitors may be considered foreseeable, even if it is not expected.</i></p> <p><i>web app attacks</i></p>
3	<p>(Credible) Expected. A likelihood exists that this will eventually occur vs assurance this will not occur.</p> <p><i>Implies a threat that is not currently common, but could or likely to eventually happen.</i></p> <p><i>Ease of attacker exploitability is moderate skill set</i></p> <p><i>E.g. Spoofing of delivery vendors, web app attacks</i></p>
4	<p>Likely, Common. This happens repeatedly in our environment or similar environments.</p> <p><i>Implies something that happens repeatedly or very likely to happen.</i></p> <p><i>Ease of attacker exploitability is low to moderate skill set</i></p> <p><i>E.g. Phishing emails, drive by malware download, mis-addressed emails with sensitive information, malware/ransomware attacks, loss of laptops and mobile devices, web app attacks</i></p>
5	<p>Almost certain, Current. This may be happening now.</p> <p><i>Implies threats that are often occurring</i></p> <p><i>Ease of attacker exploitability is low skill set</i></p> <p><i>E.g. attack reconnaissance i.e. Port scanning on perimeter devices, sharing of information in quasi-public spaces such as customer service counters or public conversations, web app attacks</i></p>

Impact Score	Impact to Our Mission	Impact to Objectives	Impact to Obligations
1. Negligible No impact, insignificant	Ability to sustain <org name> business and education operations that depend on IS and IS components	Interruption of Business and Education services	Maintain confidentiality and or integrity of personal, confidential, or <org name> sensitive information
2. Acceptable Minor impact	<org name> staff and students continue to have full access to IS and services	No interruption of IS or services availability	No breach or compromise of staff student <org name> data
3. Unacceptable Moderate impact	The majority (over 90%) of <org name> staff and students continue to have access to IS and services	The majority (over 90%) of <ORG NAME> staff and students continue to have access to IS and services Or Does not include an entire campus Does not include an entire department Or Minimal effect: the organization can still provide all priority or critical business impact services but has lost some efficiency	No breach or compromise of staff student <ORG NAME> data
4. High Major impact	Only 75-89% of <ORG NAME> staff and students continue access to IS and services	50- 69% of <ORG NAME> staff and students continue to have access to IS and services	50- 69% of <ORG NAME> staff and students continue to have access to IS and services Or The organization has lost the ability to provide a Major Business Impact service to a department(s) or campus(s). Or The organization has lost the ability to provide a service to a Major Business Impact Information System or subset of system users for that system.
5. Catastrophic Critical impact	Less than 50% of <ORG NAME> staff and students continue to have access to IS and services	Less than 50% of <ORG NAME> staff and students continue to have access to Information Systems and services Or The organization is no longer able to provide Critical Business Impact services to department(s) or campus(s).	Information System(s) that protects human life or safety Or Less than 50% of <ORG NAME> staff and students continue to have access to Information Systems and services Or The organization is no longer able to provide Critical Business Impact services to department(s) or campus(s).

50- 69% of <ORG NAME> staff and students continue to have access to IS and services Or The organization has lost the ability to provide a Major Business Impact service to a department(s) or campus(s).	Breach or compromise of staff student confidential data, <ORG NAME> sensitive data Exceeds x number of records
Less than 50% of <ORG NAME> staff and students continue to have access to Information Systems and services Or The organization is no longer able to provide Critical Business Impact services to department(s) or campus(s).	Breach or compromise of staff student confidential data, <ORG NAME> sensitive data Exceeds x number of records

Risk Severity Determining Likelihood and Magnitude (Impact) of Harm

CENTER FOR INTERNET SECURITY RISK ASSESSMENT METHOD (CISRAM)

Unlabeled Item	Unlabeled Item
1	<p>Extremely, Not Reasonable. This is a risk to the environment. Impact that is a threat to the safety or health of the environment that is being assessed.</p> <p>E.g. Potential for a chemical release that could harm the environment or a significant human population.</p>
2	<p>Substantially, Not Reasonable. This is a possible, but not expected. The organization could be expected to respond to the risk.</p> <p>E.g. A potential release of a chemical that could harm the environment or a significant human population.</p>
3	<p>Minor, Reasonable. A potential release that the risk is not likely to occur or is expected to be controlled. The risk is not likely to be a threat to the safety or health of the environment that is being assessed.</p> <p>E.g. A potential release of a chemical that could harm the environment or a significant human population.</p>
4	<p>Minor, Reasonable. The impact is expected to be controlled or minor. The impact is not likely to be a threat to the safety or health of the environment that is being assessed.</p> <p>E.g. A potential release of a chemical that could harm the environment or a significant human population.</p>
5	<p>Minor, Reasonable. The impact is expected to be controlled or minor. The impact is not likely to be a threat to the safety or health of the environment that is being assessed.</p> <p>E.g. A potential release of a chemical that could harm the environment or a significant human population.</p>

Risk Severity Determining Likelihood and Magnitude (Impact) of Harm

❑ CENTER FOR INTERNET SECURITY RISK ASSESSMENT METHOD (CISRAM)

Likelihood Score	
1	<p>Minimal, Not Noticeable: This is not likely to be discovered by the organization that is being assessed.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - Passwords are complex and not likely to be discovered prior to password expiry/rotation</p> <p>Extremely Low Noticeable: This is unlikely, but not impossible.</p> <p>The organization could be exposed if it is exposed to an exploit.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - A more sensitive setting option is available than is currently being used (e.g. a security setting).</p>
2	<p>Minor, Not Noticeable: A business could be that it is not likely to be discovered by the organization that is being assessed.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - Passwords are complex and not likely to be discovered prior to password expiry/rotation</p> <p>Low, Noticeable: This is likely to be discovered by the organization that is being assessed.</p> <p>The organization could be exposed if it is exposed to an exploit.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - A more sensitive setting option is available than is currently being used (e.g. a security setting).</p>
3	<p>Minor, Noticeable: A business could be that it is not likely to be discovered by the organization that is being assessed.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - Passwords are complex and not likely to be discovered prior to password expiry/rotation</p> <p>Medium, Noticeable: This is likely to be discovered by the organization that is being assessed.</p> <p>The organization could be exposed if it is exposed to an exploit.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - A more sensitive setting option is available than is currently being used (e.g. a security setting).</p>
4	<p>Major, Noticeable: A business could be that it is not likely to be discovered by the organization that is being assessed.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - Passwords are complex and not likely to be discovered prior to password expiry/rotation</p> <p>High, Noticeable: This is likely to be discovered by the organization that is being assessed.</p> <p>The organization could be exposed if it is exposed to an exploit.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - A more sensitive setting option is available than is currently being used (e.g. a security setting).</p>
5	<p>Critical, Noticeable: A business could be that it is not likely to be discovered by the organization that is being assessed.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - Passwords are complex and not likely to be discovered prior to password expiry/rotation</p> <p>Critical, Noticeable: This is likely to be discovered by the organization that is being assessed.</p> <p>The organization could be exposed if it is exposed to an exploit.</p> <p>Based on whether vulnerability is vulnerable to exploit, unless:</p> <p>E.g. - A more sensitive setting option is available than is currently being used (e.g. a security setting).</p>

Risk Scoring	Risk Severity
Likelihood x Impact =	9 or less = Low
Likelihood x Impact =	10-14 = Mod
Likelihood x Impact =	15-20 = High
Likelihood x Impact =	21 and higher = Very High

Tracking, Prioritizing & Managing Risk

❑ Governance, Risk, Compliance (GRC) Application

❑ Risk Register- CISRAM Workbook Tab

Risk - Likelihood x Highest Impact Score	What safeguard can we use to better implement the CIS Controls?	What risk would this recommended control pose to the mission, objectives, or obligations?	How foreseeable is it that this safeguard risk would occur and create an impact?	What impact could this safeguard risk pose to our mission?	What risk category does this safeguard risk pose to our mission?
Acceptable risk - 'Y'	What safeguard can we use to better implement the CIS Controls?	What risk would this recommended control pose to the mission, objectives, or obligations?	How foreseeable is it that this safeguard risk would occur and create an impact?	What impact could this safeguard risk pose to our mission?	What risk category does this safeguard risk pose to our mission?
Risk Score	Risk Treatment Options	Recommended Safeguard	Safeguard Risk Likelihood	Safeguard Impact	Safeguard Mission Impact
6	Reduce	<p>A moderate cost would have minimal impact on the budget duration of the fiscal study not disruption.</p> <p>Purchase and implement an appliance that actively and passively identifies if there is a breach. Implement a process for quickly adding information about access to the appliance. Appliance should be placed near all new hosts that join the network.</p> <p>Moderate cost is personnel time to add information about all access to the appliance database.</p> <p>After a breach is established, we will be able to distinguish between organization-owned systems, and guests that we do not control. Guests can be on other hardware is complete.</p>	1	1	1

❑ Prioritize risk remediation/mitigation efforts based on severity rating and current threat landscape, e.g. Top Twelve

❑ Review risks to determine

- Risk Remediation
- Risk Mitigation
- Risk Transference (Cannot transfer responsibility)
- Risk Acceptance
- Risk Avoidance
- Reference TAC 202 For Higher Education
 - (4) Approval of the security risk acceptance, transference, or mitigation decisions shall be the responsibility of:
 - (A) the information security officer or his or her designee(s), in coordination with the information owner, for systems identified with Low or Moderate residual risk.
 - (B) The state institution of higher education head for all systems identified with a residual High Risk.

Information Technology and InfoSec Partnership to Address Risk

- ❑ Risk based approach for remediation/mitigation of risk findings
 - Project Prioritization
 - Budget Allocation
 - Resource Allocation
- ❑ Collaboration is key
 - Discovery
 - Planning
 - Implementation
 - Monitoring
- ❑ Documenting processes, establishing technology policy
 - Establish central repository for all documentation
 - Include Information Security with proposed changes and technology
